# Dental Restorative Series

## Part 1

Take your implant practice to the next level with the Dental Implant Restorative Series. This course is specifically designed to provide dentists with the skills and knowledge to restore dental implants confidently and routinely, creating a seamless partnership between the implant surgeon and the restoring doctor.

## Course highlights

**Expert-led learning:** Gain in-depth knowledge on implant restoration through engaging lectures and hands-on practice with experienced instructors.

**Earn CPD credits:** Get recognised for your professional growth while learning in a small group environment.

**Expand your patient base:** Learn how to offer in-demand implant treatments and boost your practice's offerings.

## Course objectives

- Master the proper restoration techniques based on specific treatment indications.
- Expand your patient base by offering high-demand implant solutions.
- Strengthen collaboration between the restorative dentist and the implant surgeon to provide more effective patient care.

## From single-tooth to full-arch restorations

### Topics covered

- Restoring the anterior single implant
- Restoring the posterior single implant
- Understanding implant impression techniques and temporization
- Multi-unit restorations
- Socket preservation techniques
- Restoring the edentulous mandible
- Restoring the severely resorbed maxilla
